

REMOTION KNEE

designed by D-Rev in California

ReMotion is an \$80, CE-marked polycentric knee joint. The mobility offered by the ReMotion prosthetic knee supports amputees in doing what they love: enjoying an active social and family life, education, and career.

EFFICIENT

Polycentric four-bar knee enables a stable and natural gait. ReMotion's design is resistant to buckling on heel-strike, and provides increased toe clearance to reduce chances of a patient tripping

DURABLE

Made of long-lasting plastic and stainless steel, ReMotion works in the harshest and most demanding environments, withstanding heat, humidity, and dirt

ReMotion officially passed all ISO 10328 testing standard for lower-limb prosthetics, and has received CE mark. CE mark certificate is available upon request.

ReMotion lifetime: 3-5 years

COMFORTABLE

Improved aesthetics and design ensure amputees feel comfortable, confident, and secure wearing ReMotion

- Customizable extension assist (coming soon) provides a smooth, efficient walking motion and helps new patients feel confident and stable.
- Adjustable friction offers a steady, controlled swing phase for a predictable step
- Curved aesthetic mimics a life-like knee under clothing
- High range of motion (160°) gives amputees flexibility to move freely, including kneeling, squatting, and riding a bicycle

AFFORDABLE

The ReMotion Knee costs \$80 USD
Price does not include shipping and taxes

BENEFITS

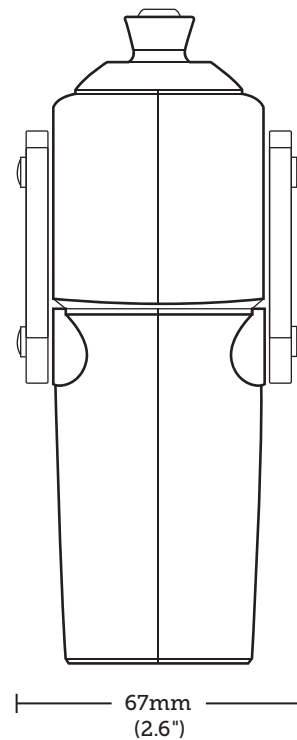

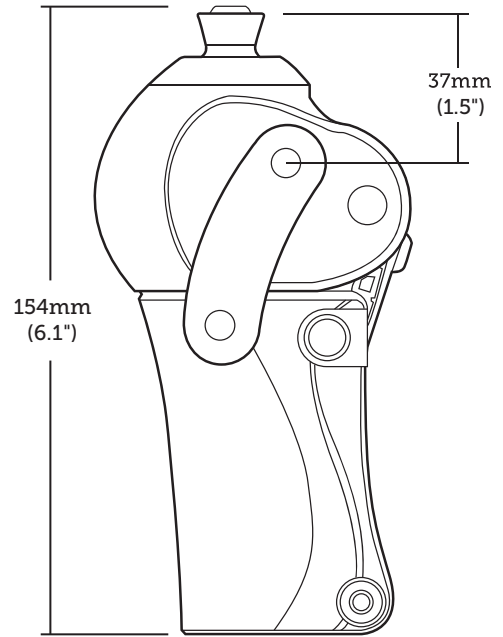

- Polycentric, four-bar knee
- Adjustable friction control
- Adjustable or removable extension assist (high, medium, low strength) (coming soon)
- Up to 160° range of motion
- Weight limit of 80kg (176lbs)
- Knee weight: 618g (22oz)

Pyramid adapter

Friction adjustment screw

High/med/low extension assist (coming soon)

30mm tube clamp
